## Benzenesulfonamide 4- methyl polymer with formaldehyde

The best chemical manufacturers of quality of research chemicals and biochemicals including inhibitors, building blocks, GMP products, Impurities & Metabolism, API For veterinarians, natural compounds, ADCs, Stem cell molecules and chiral BOC science compounds provide a wide range of services to support the pharmaceutical industry through all stages of drug discovery, including the custom synthesis of those chemicals that are not in stock, Isotope labeling services, chiral synthesis and resolution, Bioconjugation, PEGylation Services, BOC Sciences Analytics Services, BOCSCI Inc. brands. A complete set of our CRO services covers all molecular development pipelines including promising research for target identification, block formation, compound synthesis, biochemical and cellular analysis, testing of preclinical animals, and clinical studies. Category:US/EU/FDA/FDA/JECFA/IFEMA/FLAVIS/Academic/Patent Information: Physical Properties: Neurodehthing: Cosmetic Information: Suppliers: Safety Information: Reference: Other Information: Potential Blender and Main Components Note Potential Usage: Emergence (Natural, Food, Other):Note Terms: No Formaldehyde Free Product Name\* CAS. No number of queries\* \* Port described query\* \* Add attachment (file format: Jpg, Gif, Png, PDF, Zip, Txt, doc or xls maximum size: 3MB) Toluenesulfonamide Formaldehyde Resin Structure CAS No. 25035-71-6 Chemical Name: Toluenesulfonamide Formaldehyde Resin MS-80% TOSYLAMIDE/FORMALDEHYDE RESIN; TOLUUN SOLLIFORM DEHYDERINE; TOLUN SULFONIDE FORM DEHYDERINE; RESIN TOLUENE SULFONIDE-FORMALDELYDEHYDE;4-toluenesulfonamide-formaldehydeIDE formaldehyde resin;p-Toluenesulfonamide-formaldehyde resin CBNumber: CB7488797 Molecular Formula: C8H11NO3S Formula Weight: 201.201. 24284 MOL File: 25035-71-6.mol SAFETY Risk and Safety Statements Toluenesulfonamide Formaldehyde resins are used as accelerometer and plastics in polyamide resins, epoxy resins, phenolic resins, formaldehyde, inks, coatings etc. of formaldehyde resin, Toluene sulfonamide is used as an adaptor and adhesion promoter for natural resins and synthetic forming film. In vinyl, lacer, nitrocellulose elements (naillacquers), acrylic polyvinyl alcohol adhesives. This substance occurs by condensation of formaldehyde and toluenesulfonamide and is it is also known as the Brand. It may be used in industrial applications as modifiers and adhesive primer for natural and synthetic resins during film production. It is also found in vinyl lacquer and nitrocellulose elements. Avoid products that list the following names in the ingredients: • 4-Toluenesulfonamide-formaldehyde resin • Benzenesulfonamide, 4-methyl-, polymer with formaldehyde • Tosylamide / formaldehyde resin • Santolite MS • Santolite MHP Some Products May Contain Tosylamide / Formaldehyde Industrial Adhesive Nail Primer Hardeners Nail Polish Nitrocellulose Vinyl Lacquer Elements Additional Resources and Links for Tosylamide / Formaldehyde Resin To submit a resource or link, please fill out the submission form at the top of this page. For more information about products that may contain Tosylamide/Formaldehyde Resin, please visit the online household product database at the U.S. National Library. These items are short and provide a few examples. They're not covered. Product formulations also change frequently. Read the product label carefully and talk to your doctor if you have any questions, these are general guidelines. Synonyms 4-Toluenesulfonamide-Formaldehyde Resin; Benzophe Sulfonamide, Polymer 4 Methyl With Formaldehyde; Tosylamide Resin / Formaldehyde; Benzophe Fulamide, Polymer 4 Methyl With Formaldehyde; Santo MSLite; [ChemIDplus] PolymID (p-toluenesulfonamide-co-formaldehyde); [Marks] toluenesulfonamide / formaldehyde resin sources in nail polish cause allergic contact dermatitis, often on the face and neck, but also on the fingers. periungually [Mark, p. 183] [RTECS] can cause irritation; Biomedical References
